

INDUSTRIAL ENGINEER (M/W/D)

To strengthen our team we are looking for a new colleague (m/f/d) for the next possible date as:

Industrial Engineer (m/f/d)

PROFILE:

- You have a successfully completed (technical) university degree in mechanical engineering, production engineering, automation technology or a comparable qualification with at least 5 years of professional experience in the automotive or mass production sector.
- You have know-how in process development in a manufacturing company and good methodological skills, e.g. in Lean Management, 8D Report, FMEA, etc.
- You have experience in project management and an analytical and innovative mindset.
- Your strengths include organizational and coordination skills, problem-solving competence and an independent and structured way of working.
- Your distinctive communication skills and willingness to cooperate distinguish you.
- Your knowledge of MS Office is good to very good, you can communicate easily in German and confidently in written and spoken English; French skills are desirable.

TASKS:

- Analysis and evaluation of processes in terms of productivity, costs and quality
- Implementation of profitability and feasibility analyses (make or buy decisions)
- Systematic identification of improvement potential as well as continuous monitoring and further development of processes in close cooperation with the plant management
- Planning and procurement of machines, operating resources and equipment
- Optimization of production layout
- Optimization of process technologies, production methods and plants along the entire value chain
- Leading cost saving projects to increase efficiency

WHAT WE OFFER:

- A wide range of development opportunities via internal or external training courses with demand-oriented, individual design options
- Interesting employer services such as Lease-a-bike, Belonio app, attractive company pension scheme, participation in sporting events
